CONCLUSIONS

Although our results were unable to provide significant results, that may change given future research into the topic. Using a larger sample size and more comprehensive question0 g0 G(c)4(ompr)14

Abstract

The idea of siblings having an effect on an individual's academic performance and success is one that does not seem out of the ordinary. Throughout this research study, we engaged college students with a survey, and recorded their grade 3.23 Tm0 g0 G(ac)7F1 44.04 Tf1 0 0 1 525.12 1553.c 0 3456 3024 reW*nBT/F1 44.04 Tf1 0 0 1 507 1606.03 Tm0 g0822 G(0eir))TJETQ EMperf

Figure 1. GPA compared between students with one sibling and more than one.

by GPA. The students overall academic success as measured by grade point average did not differ significantly between the student participants

Figure 3. Survey-Questionaire

there was no evidence of order effects.

These results show a trend that could give a more definitive answer if we had a larger sample size. The current results we have obtained do not have enough statistical significance to make a conclusion.
